**OhioHealth Mothers' Milk Bank to Open Milk Drop Site at  
Canton City Public Health WIC**  
*Grand opening to be held on August 24, 2022*

**COLUMBUS, Ohio** - The OhioHealth Mothers' Milk Bank is celebrating the grand opening of a new milk drop location at Canton City Public Health WIC on August 24, 2022 from 2:00 – 4:00 PM at the Stark County Community Foundation Goldsmith Conference Room. The new milk drop site, located at 420 Market Ave. N. in Canton, will house a freezer to store donated human milk, which will then be transferred to the milk bank in Columbus at no cost to the donor.

The OhioHealth Mothers' Milk Bank, under the guidelines of the Human Milk Banking Association of North America (HMBANA), provides pasteurized human milk to those infants whose mothers are unable to provide milk to nourish their babies. It is one of just 29 milk banks in North America – 26 in the United States and three in Canada.

“We are thrilled to be opening this new milk drop to make donating even easier,” said Chris Smith, RN, IBCLC, outreach coordinator and lactation consultant at the milk bank. “With this new milk drop, approved donors in and around Canton can conveniently donate their milk. Pasteurized donor milk is liquid gold for babies who need it. In 2021 alone, we distributed nearly 421,107 ounces of milk all over the country – that’s 3,289 gallons! Just one ounce can feed a premature infant for three days, so every little bit helps.”

The Canton site marks the 20<sup>th</sup> OhioHealth milk drop location in Ohio. The donated milk is distributed throughout North America to babies in need.

“We are excited to be able to provide a milk drop site at the Canton City Public Health WIC office,” said Jennifer Hayden, RN, IBCLC, WIC Breastfeeding Coordinator and lactation consultant for the Stark County WIC program. “We have long wanted to be able to provide this service and are grateful to now have the opportunity to provide a convenient place for pre-approved mothers to drop off their gift of donated breastmilk to share with infants and children who need it the most.”

The milk bank, which is located in the OhioHealth Eastside Health Center in Columbus, relies on donations from healthy, lactating women who generously provide milk to help other babies. Interested donors are encouraged to email [milkbank@ohiohealth.com](mailto:milkbank@ohiohealth.com) or call (614) 566.0630 to arrange a screening

phone interview. To become a human milk donor, mothers must take part in a screening process to ensure the quality and safety of the milk. This process includes a phone screening to verify eligibility, completion of a medical and lifestyle history review, a signed medical release from the donor and physician and consent to receive a blood test to screen for HIV, HTLV, Hepatitis B, Hepatitis C and syphilis. The donated milk is pasteurized, frozen and distributed by physician prescription.

### **Benefits of Breast Milk**

Infants benefit greatly from human milk, especially those who are premature, ill, or have life-threatening conditions. Human milk is the ultimate source of nutrients and immune protection for infants. Babies benefit from the active growth hormones, developmental enzymes, infection fighting and immunological factors found in human milk.

Research shows that human milk helps pre-term infants:

- Reach full feeds sooner and need fewer IVs
- Mature their intestines faster
- Spend fewer days in the hospital
- Reduce risk of necrotizing enterocolitis (a potentially fatal bowel infection)
- Reduce risk of sepsis (blood infection) and fewer infections
- Experience long-term IQ advantages over formula-fed infants
- Be healthier as older children and adults
